EDUCATION

- **B. Tech Computer Science with AIML** - Kalinga University, Raipur | CGPA: 8.6/10 (1st Year) | Currently pursuing specialization in AI & Machine Learning - **2023-2027**
- **Higher Secondary XII - CBSE**, (2022) – Radhika Senior Sec. School, Gorakhpur | Science Stream with Computer Science - **2022**
- **Secondary X – CBSE** – Oxford Public School, Gorakhpur - **2020**

SKILLS SUMMARY

- **Programming Languages:** Proficient in Python (Data Structures, Web Dev), C (System Programming), SQL (Database Design, Complex Queries)
- **Frameworks & Libraries:** Experienced with NLP (NLTK, Transformers), TensorFlow, PyTorch, Data Science Stack (Pandas, Numpy, Scikit-Learn), Data Visualization (Matplotlib), GUI Development (Tkinter).
- **Development Tools:** Machine Learning (Model Development), Deep Learning, Skilled in Excel (Data Analysis), PowerPoint (Presentations), MySQL (Database Management System)
- **Development Platforms:** Regular user of GitHub (Version Control), PyCharm (Python IDE), Jupyter Notebook (Data Science), Visual Studio Code (Multi-language IDE)
- **Professional Skills:** Demonstrated expertise in rapport building, effective communication, and collaborative team leadership across multiple projects.

PROJECTS

- NeuroInsight AI – 3D Brain Tumor Segmentation & ROI Detection** | [LINK](#) Aug. – Nov. 2025
- Designed and implemented a 3D U-Net based deep learning model for accurate brain tumor segmentation and ROI detection in volumetric MRI scans.
- SymptomIQ** | [LINK](#) Jan. – Feb. 2025
- Developed a Flask-based web application that predicts health conditions using a TensorFlow model and provides tailored advice via Google Gemini API, integrating geolocation for personalized doctor recommendations.
- Deep Fake Detector** | [LINK](#) Jan. – Feb. 2025
- Developed a web-based deepfake detection tool using TensorFlow and Flask, enabling users to upload images and classify them as "FAKE" or "REAL" with an accuracy-driven machine learning model.
- Automated Power Monitoring System** | [LINK](#) Sept. – Nov. 2024
- Developed a real-time human presence detection system using computer vision to monitor room occupancy and optimize energy usage by automating appliance control.
- Student Management System** | [LINK](#) Aug. – Dec. 2024
- Developed a comprehensive student management system with a user-friendly Tkinter-based interface, integrating MySQL for secure and efficient data storage.

ACHIEVEMENTS

- **Won the Intra-Institutional Start-up Competition** for developing an Automated Power Monitoring System, a project that optimizes energy usage by detecting room occupancy and controlling appliances in real-time, showcasing innovation and practical solutions for energy efficiency.
- **Participated in National level 24 hours Hackathons** – Kalinga Hackathon , Hackomania & Hackgenx Hackathon

CERTIFICATES

- Programming in Python (Hacker Rank) - Advanced Python programming with covering data structures. | July-2024
- Artificial Intelligence & Machine Learning (Teach Nook) - Comprehensive ML certification covering supervised/unsupervised learning, neural networks, and deep learning fundamentals | Feb.-2024
- SQL (Hacker Rank) - Database management, complex queries, joins, stored procedures, and performance optimization with hands-on projects | July-2024
- Programming in C (HackerRank) - Advanced C programming concepts including pointers, memory management, and data structures with 5-star rating | July-2024
- Participated in HackGenX (National-level Hackathon) | April-2025
